

FixPose v1.1.11 -- Release Notes & Demo Guide

Build: releases/v1.1.11/FixPose-v1.1.11-debug.apk (238.5 MB)
Commit: a1590b2 | Version: 1.1.11+12
Min SDK: 24 (Android 7.0) | Target: Android 14
Date: 2026-10-01

[OK] What Ships in This Build

P4 -- Home (Strike, Greeting, Graph, Slots)

- Streak counter -- consecutive workout days with animated fire icon
- Personalized greeting -- time-of-day + name from profile
- Weekly activity graph -- 7-day bar chart (workout minutes)
- Plan slots preview -- next 3 scheduled sessions with "Start" buttons

P5 -- Plan (AI Schedule, Library, Meals, History)

- AI-generated weekly plan -- one-tap from Plan tab
- Smart exercise library -- searchable, filterable catalog (24 exercises)
- Meals today -- kcal progress bar + per-meal-type tiles (breakfast/lunch/dinner/snack)
- History -- expandable session list with form score, duration, reps

P6 -- VEDA + Nutrition + Export

- Meal logging -- search foods, add custom, per-meal-type (B/L/D/S)
- Calorie target editor -- persistent daily goal (Settings -> Meal screen)
- AskVEDA kcal -- "How many calories in 2 eggs + toast?" -> structured answer
- PDF progress report -- weekly summary with charts, exportable via share sheet

P7 -- Notifications + Settings

- Daily workout reminder -- exact alarm (AlarmManager), timezone-aware, survives reboot/force-stop
- Hourly self-heal -- workmanager task re-arms lost schedules
- Settings toggles -- reminders on/off, time picker, coach voice mute, export, sign-out

[OK] WS9 -- Count Consistency & Anti-Fake Fixes

Issue	Fix
----- -----	
Push-up lockout too strict	Lowered to **153 ^o ** with same
**Depth wobble at 90° steals R	State-order reorder: `bottom`
Hammer curl double-counts	Changed to **`max(left, right)`
**Phantom "not counted" on ses	First FSM commit never rejects
**Fake workout (video) counted	Analyzer pauses counting on `v
Silent rejections	Every lock-reason transition *

[TARGET] Demo Script (5 min)

- 1. Install APK -> Grant camera + notification permissions
- 2. Home -- See streak, graph, next session slot
- 3. Plan -- Tap "Generate AI Plan" -> see week, meals card, library
- 4. Meal screen (FAB or Plan -> Log meal) -- Set kcal target (e.g., 2200), log breakfast
- 5. Plan refresh -- Meals card now shows progress bar + breakfast tile
- 5. VEDA -- Ask "Calories in chicken breast?" -> structured reply
- 5. Workout -- Start a squat session -> count reps, see form score, hear cues
- 5. Fake test -- Point camera at phone playing exercise video -> "Video detected" banner + voice, counting pauses
- 5. Settings -- Toggle reminders, set time, mute coach, export JSON

[X] Deferred to v1.1.12

UI

Known Limitations

- Meals on Plan tab -- Requires a calorie target set first (Meal screen -> target editor). Without target, defaults to 2000 kcal.
- Video fake detection -- Catches looped/metronome videos via rhythm CV + z-depth; continuous non-looped video of a human is motion-identical to live (fundamental ML limitation).
- Skeleton overlay -- ML Kit landmarks; One-Euro smoothing applied per landmark.
- iOS -- Not targeted (Android-only minSdk 24).

Install & Test

```
adb install -r releases/v1.1.11/FixPose-v1.1.11-debug.apk
```

Or download from GitHub Actions (if CI configured) / direct transfer.

Next Sprint (v1.1.12)

1. Complete WS2: rounds/rest editor, wrong-pose popup, calibration, congrats card
2. Integrate speech arbiter (SoundEngine: speechRate=0.45, utteranceGap=400ms, urgent interrupt)
3. MediaPipe Tasks Pose Landmarker migration (native CameraX + world landmarks + segmentation)
4. Per-rep voice counting toggle (milestone every 5 -> optional every rep)
